Business Continuity Policy

RAD management is committed to constantly providing its customers with quality products and an uncompromising level of service. This commitment also remains valid in the event of emergency or significant business disruption.

In order to support the above, RAD has implemented and institutionalized a comprehensive Business Continuity Management system (BCMS) in compliance with **ISO-22301,** which proactively improves the company's resilience against disruption and allows RAD to provide continuous communication, deliveries and support to its customers.

The BCMS is designed to work in a variety of emergency situations and is aimed at reducing the likelihood of any business disruptions as well as shortening the period of disruption and limiting its impact on products and services.

RAD management provides all the necessary resources for this purpose.
