

Your Benefits:

- Scalable solution allows operators to spin-up virtual managed services, from security to routing, SD-WAN to IT services, and much more
- Cost-optimized white box vCPE for business services
- Open, high performance operating system (vCPE-OS) runs on any white box and supports any access with PM, troubleshooting and self-healing
- Pluggable physical network functions (P-PNFs) allow assured seamless connectivity over Ethernet fiber/copper, WiFi, xDSL/PDH/GPON, as well as LTE (uplink/backup)
- Integrated and optimized compute resources enable remote deployment of network functions and value-added services; VNF download and service-chain configuration are performed with a powerful and intuitive edge orchestrator
- CPU hardware offload, together with forwarding plane acceleration, allows consistent and predictable wire-speed performance with built-in service assurance, freeing up CPU resources for additional services

Products Included in this Solution:

ETX-2i, ETX-2v vCPE Platform

MiNID Miniature Programmable Network Interface Device

vCPE-OS Open Carrier-Class operating system

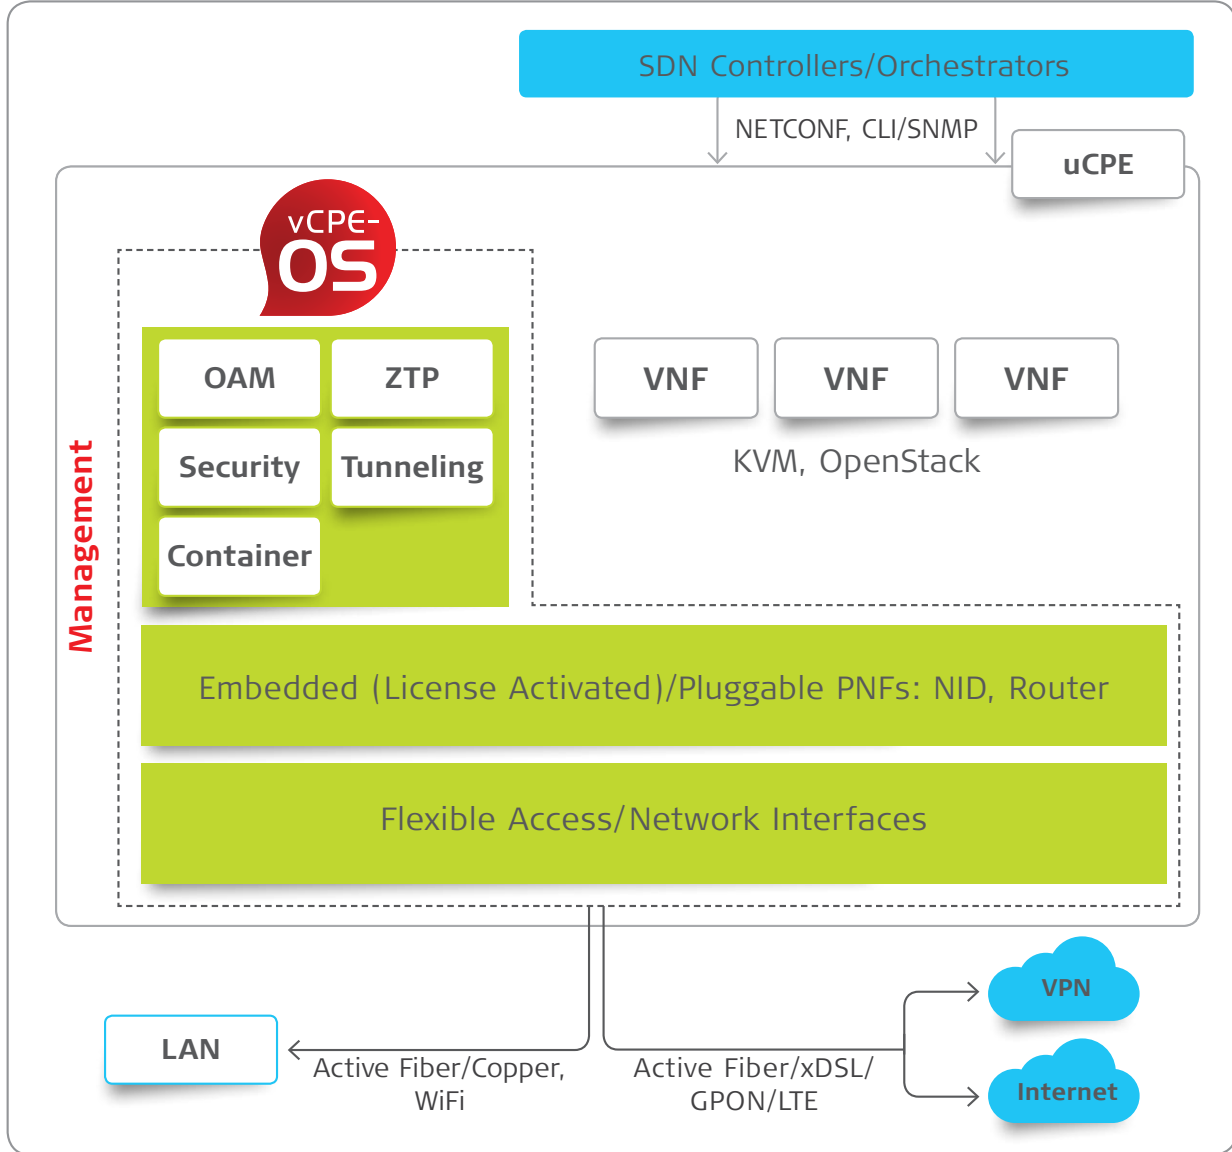

RADview Management and Domain Orchestration

vCPE System Architecture

- Open NFV/SDN architecture facilitates integration with network-wide orchestrators and SDN controllers
- Powerful, carrier-class operating system (vCPE-OS), pre-integrated on RAD's vCPE platforms and also available for third-party white box devices
