

Environmental Policy

RAD management is committed to protecting the environment and conducts its operations in a manner that is environmentally responsible. To support the above, RAD has implemented and institutionalized its Environmental Management System in compliance with **ISO-14001** and actively promotes the following:

- Compliance with all applicable environmental laws and regulations
- Identification of environmental risks in its processes
- Design of products and selection of materials and processes that eliminate hazardous materials or reduces them to a minimum wherever possible
- Conduct of operations in a manner that safeguards the natural environment and preserves natural resources by eliminating or significantly reducing the release of contaminants
- Encouragement of suppliers, subcontractors, and employees to be good stewards of the environment by complying with applicable environmental requirements: Pollution prevention, waste reduction, and the conservation of energy, water and other natural resources
- Periodic reviews of the company's environmental performance and an intention to demonstrate continuous improvement.

Sustainability and Climate Change

In addition to the above, RAD recognizes the urgent need to address climate change. Rising greenhouse gas emissions threaten ecosystems, weather patterns, and sea levels.

Our commitment extends beyond compliance as we aim to significantly reduce GHG emissions and contribute to a sustainable future. By integrating climate resilience into our operations, we can protect both the environment and our business interests.
